DISTRICT CENSUS HANDBOOK
1951

JALAUN DISTRICT

FOREWORD

Several States, including Uttar Pradesh, have been publishing village statistics by districts at each census. In 1941 they were published in U. P. under the title "District Census Statistics" with a separate volume for each district. In the 1951 census, when the tabulation has been more elaborate than ever in view of the requirements of the country, the district-wise volume has been expanded into a "District Census Handbook", which now contains the District Census Tables (furnishing data with break-up for census tracts within the district), the District Index of Non-agricultural Occupations, agricultural statistics from 1901-02 to 1950-51 and other miscellaneous statistics in addition to the usual village population statistics. The village population statistics also are given in an elaborate form giving the division of the population among eight livelihood classes and other details.

2. It may be added here that a separate set of district-wise volumes giving only population figures of rural areas by villages and of urban areas by wards and mohallas and entitled "District Population Statistics" has already been published. This separate series was necessitated by the urgent requirements of the U. P. Government for elections to local bodies.

3. The number of District Census Handbooks printed so far is thirty three. Special arrangements for speeding up the printing have now been made and it is hoped that the remaining Handbooks will be printed before the end of 1955.

RAJESHWARI PRASAD, I.A.S.,

Superintendent, Census Operations,

Uttar Pradesh.

2 List of Primary Schools	172-174

INTRODUCTION

A—THE DISTRICT

1. The district of Jalaun is the northern most of the Bundelkhand group. It is bounded on the north and north-east by the Etawah and Kanpur districts, on the east by Hamirpur district, on the south by the Jhansi and Hamirpur districts and on the west its boundary runs parallel with that of Madhya Bharat. Due to recent transfers on account of "the Provinces and States (Absorption of Enclaves) Order, 1950," the district lost 4.7 square miles to Madhya Bharat, while it gained 167.9 square miles from the former States of Baoni and Datia. The district has a total area of 1,762 square miles and its population in 1951 was 5.55 lakhs. It has 4 tehsils, 4 parganas and 11 thanas.

2. The main physical features of the district are largely determined by the three rivers—the Yamuna, Betwa and Pahuj—which nearly encircle it. The same characteristics are common to all, varying in proportion to their respective sizes. They are surrounded by a deep network of ravines running as a rule one to two miles from the stream. These ravines are succeeded by a bank or belt of higher land the surface of which gradually falls the farther the river is left behind. The high lands border on the *khadar* valleys of the Betwa and Pahuj while the lowlands occupy the central tract. The latter is thus a wide flat basin encircled by a narrow rim of higher ground which breaks up into a network of ravines along the river banks, stretching for some miles inland from the streams. The levels are clearly indicated from the situation and direction of the branches of the Betwa canal which follows the watersheds closely. The drainage of the central tract is supplied by the two minor streams the Non and the Melunga which flowing north-east wards unite some eight miles from the Yamuna bank and join that river an equal distance to the north of the town of Kalpi. Like the larger rivers they have carved deep ravines which increase in extent the nearer the Yamuna is approached and as a consequence of their action, the Kalpi tehsil is cut up by a tracery of ravines, which have scoured the greater portion of the soil and contains more barren and sterile land than any other part of the district. As in other parts of Bundelkhand the soil suffers rather from excessive than deficient drainage. The natural divisions into which the district falls are clearly marked. Around it is a fringe of ravines almost valueless from an agricultural point of view. They are some times edged by a strip of land covered by rich alluvial soil; but for the most part they are unculturable and consist of a series of low hillocks thickly strewn with nodules of *kankar*. The upland which succeeds the ravines is poor in quality. It has a light coloured, hard soil, the most valuable properties of which are washed away by the downward flow of the rain water. To the north there is a tract of loam the characteristics of which resemble those of the *doab*, but practically the whole of the south and centre of the district beyond the upland, excluding the area in tehsil Kalpi affected by the Non and the Melunga, is occupied by the central plain of *mar* and *kabar*. There are no hills, and the red soil which is found in the hilly tracts of Jhansi is absent but in other respects the district is a typical part of Bundelkhand.

3. The soils of the district are the well known soils of Bundelkhand, *mar*, *kabar*, *parwa* and *rakar*. *Mar* is a calcareous soil of a prevailing blackish hue interspersed with small lumps of *kankar*, friable and very retentive of moisture. It has got a higher degree of fertility, growing crops year after year of mixed wheat and gram with neither irrigation nor manure. It becomes quickly over-saturated with moisture and when this happens its miry nature renders tillage impossible. *Kans* too runs riot in it, throwing large areas out of cultivation and rust spreads with extraordinary rapidity in wet springs. *Kabar* is the most widely diffused of any soil. It consists of two kinds, the pure dark *kabar* which has much in common with *mar* and the lighter coloured variety probably containing an admixture of *parwa*. Both kinds are distinguished by extreme hardness and cohesion. The dark *kabar* possesses in a lesser degree the retentiveness of moisture but the higher coloured soil dries quickly as soon as the rains are at an end. If the rains are heavy the land becomes a quagmire; when they cease it hardens rapidly and cakes to such an extent that it cannot be turned over by plough. *Parwa* in its pure form is almost confined to the northern portion of the district and the alluvial areas. Elsewhere in the uplands, in the dark soil and in neutral tracts, it is found in an impure form mixed with *kabar* and hardly distinguished from the lighter coloured variety of that soil. Pure *parwa* is a loam of mixed clay and sand, usually with a grey colour but often assuming a reddish tinge. It is a fertile soil and with the aid of manure and irrigation will grow most varieties of crops. Porous in texture, it is capable of absorbing any amount of rain and even if the rainfall ceases early it can still be prepared for *rabi*. *Rakar* is a refuse soil lying on sloping ground or in ravines. It is usually thickly strewn with *kankar* and in its poorer forms is too weak for continuous cultivation. It is commonly divided into *moti* and *patli* the former connoting varieties of *mar* and heavier *kabar* and the latter of lighter *kabar* and *parwa*. *Kachhar* and *tari* are alluvial soils in the beds of streams and rivers whose quality depends entirely on natural floods.

Topogra phy

Soils

Classification of area

4. The figures of classification of area during the last fifty years are given in Table 2 of Part III of this volume. The proportion of area under the various categories works out as follows for 1950-51 :

Particulars	Actual figures (in acres)	Percentage
Cultivated area	790,739	70.1
Culturable waste (excluding current fallow)	104,941	9.3
Current fallow	36,457	3.2
Forest	6,085	0.5
Area not available for cultivation of which—	190,117	16.9
(a) Covered with water	33,762	3.0
(b) Under sites, roads and buildings	28,265	2.5
(c) Barren	128,090	11.4

The figure in the above table regarding culturable waste taken from the Season and Crop Report is however, misleading. The State Agriculture Department conducted in 1949-50 a detailed enquiry through the District Officers regarding the nature of this area in each district. The following analysis of the area resulted from this enquiry :

Particulars	Area (in acres)	Percentage
Total culturable waste (A+B+C)	91,175	100
A—Area under culturable waste land not available for immediate cultivation ...	25,089	27.52
(i) Forest under any legal enactment	2,650	2.91
(ii) Groves	7,413	8.13
(iii) Forests of timber trees	7	0.01
(iv) Thatching grasses, shrubs and bushes	7,306	8.01
(v) Land kept for grazing	7,713	8.46
B—Area under culturable waste land available for immediate cultivation but which could not be cultivated	19,293	21.16
Of which due to—		
(i) <i>Kans</i> growth	2,133	2.34
(ii) Threshing floors	1,391	1.53
(iii) Malaria
(iv) Floods	11	0.01
(v) Lack of drains	495	0.54
(vi) Lack of water	1,103	1.21
(vii) Distance from <i>abadi</i>	253	0.28
(viii) Damage from wild animals	5,079	5.57
(ix) Other causes	8,828	9.68
C—Area under culturable waste land that can be brought under immediate cultivation after some improvements besides the area given against 'B.'	46,793	51.32

From the above it will appear that of the total area recorded as cultivable waste, only 51.3 per cent. was really capable of being brought under immediate cultivation after some improvements.

Thus the land area cultivated and cultivable including current fallow *per capita* works out to 167.9 cents of which 149.0* cents have already been brought under cultivation and only about 8.4 cents can be further brought under the plough after some improvements.

Climate and rainfall

5. The climate of Jalaun is as a rule hotter and drier than that of the districts north of Yamuna. The hot weather sets in earlier and lasts longer. The cold weather is dry and chilly but frosts are not common. Dust-storms are of less frequent occurrence than in the *doab*. During the rain the air is cooler. The general absence of trees and that of vegetation during the hottest time of the year intensifies the dazzling blaze.

Naturally the rainfall will not suffer if more than twenty inches fall provided that these are well distributed but excessive falls are disastrous to the black soil tracts and serious deficien-

* The figure also includes the area classed as current fallow.

cies are fatal to the entire district. The average fall during the last quinquennium was 33·13 inches. During the last forty-five years the rainfall has been less than 18 inches only in 3 years and in only one year (1919-20) it was more than 50 inches.

6. Irrigation is derived from canals, wells and other reservoirs. In 1950-51 the irrigated area from canals was 99·0 per cent., by wells 0·7 per cent. and by other sources 0·3 per cent.

Irrigation

7. More acreage is sown under *rabi* crops than under *kharij* crops. The area under *rabi* in 1950-51 was 583,017 acres, that under *kharij* 218,600 acres and that under *zaid* crops 300 acres. The principal *rabi* crop is gram followed by wheat. The principal *kharij* crop is *juar* and *bajra*.

Crops

B—ANALYSIS OF THE STATISTICS

1. The table below shows the two basic figures—land area and population—and the derived figures of land area *per capita* :

Population :
General distribu-
tion and density

Tehsil				Population (in lakhs)	Density (number per square mile)	Land area (in lakhs of acres)	Land area <i>per capita</i>
Jalaun	2·13	415	3·29	1·54
Kalpi	1·19	248	3·07	2·58
Konch	1·31	319	2·62	2·00
Orai	0·92	257	2·29	2·49
Jalaun district	5·55	315	11·27	2·03

This district though thirtieth in order of area stands forty-sixth in the State in respect of population. The density of the district per square mile is only 315 while the average density of the State is 557. The district has a low density owing to its hilly nature. The rural density of the district is 271 per square mile, the density of the rural parts of the tehsils being : Jalaun 372, Kalpi 216, Konch 274 and Orai 201. Both the Orai and Kalpi tehsils are much ravined and comprise of large areas of barren land. (*Vide* Tables A-I and E).

2. The growth of population in the district during the last fifty years has been quite rapid. The population of the district in 1951 was 30·6 per cent. higher than what it was fifty years ago. Compared to this the increase in the population of the State during the corresponding period has been 30 per cent. The table below exhibits the variation in the total, rural and urban population for the last five decades.

Growth of
population

Census year			Population			Variation		
			Total	Rural	Urban	Total	Rural	Urban
1901	425,239	375,770	49,469			
1911	432,397	384,604	47,793	+7,158 (+1·7)	+8,834 (+2·4)	—1,676 (—3·4)
1921	432,439	388,513	43,926	+42 (+·01)	+3,909 (+1·0)	—3,867 (—8·1)
1931	453,395	406,006	47,389	+20,956 (+4·8)	+17,493 (+4·5)	+3,463 (+7·9)
1941	516,984	455,411	61,573	+63,589 (+14·0)	+49,405 (+12·2)	+14,184 (+29·9)
1951	555,239	466,797	88,442	+38,255 (+7·4)	+11,386 (+2·5)	+26,869 (+43·6)

A noteworthy feature is that between 1901 and 1921 the population of the district recorded an increase of 1·7 per cent. when that of the State decreased by 4·0 per cent. The district suffered but slightly from plague and malaria during 1901—11 and inspite of the heavy mortality from influenza, an increase (though very small) was recorded during the decade 1911—21. The urban population suffered a loss due to “abnormal deaths” from the epidemics. Abnormal deaths did not occur or were prevented from occurring in the post-1921 period but the population of the district recorded an increase of only 28·4 per cent. since 1921 against an increase of 35·5 per cent. in the population of the State during the same period apparently due to loss of population on the balance of migration.

The population of the district has increased less than the State average during 1941—51. It recorded an increase of 7·4 per cent. while the population of the State increased by 11·8 per cent. The variations were spread unevenly throughout the tehsils, the increase in the tehsils being : Jalaun 5·6 per cent., Kalpi 8·5 per cent., Konch 6·4 per cent. and Orai 12·0 per cent.

Vital Statistics

3. Births and deaths mainly account for the trends in the population growth. Migration also is a factor though of lesser importance. The following table gives the mean decennial registered birth and death rates and the calculated natural increase rates and the population growth rates of the last three decades for the district as a whole and for its rural and urban areas :

				Total	Rural	Urban
<i>Mean decennial birth-rate</i>						
1941—50	31.0	30.5	33.7
1931—40	42.1	41.9	43.4
1921—30	35.5	36.5	27.3
<i>Mean decennial death-rate</i>						
1941—50	22.0	21.8	23.1
1931—40	24.0	23.9	24.6
1921—30	26.2	26.8	21.1
<i>Mean decennial rate of natural increase</i>						
1941—50	9.0	8.7	10.6
1931—40	18.1	18.0	8.8
1921—30	9.3	9.7	6.2
<i>Mean decennial growth-rate</i>						
1941—50	7.1	2.5	35.8
1931—40	12.4	10.6	26.0
1921—30	5.0	4.6	7.6

There are large omissions in the registration of births as well as deaths and so the above rates do not represent the true picture at all. They may, however, be taken to be roughly indicative of trends. Birth-rate has fallen during the last decade and so do the death-rate.

The figures of natural increase and growth-rate suggest considerable loss of population by migration during the last three decades.

The average yearly mortality from various causes in the district during 1941—50 was as follows :

Causes				Number of deaths	Percentage of total deaths
Fever	9,587	81.4
Dysentery and diarrhoea	51	0.4
Respiratory diseases	266	2.2
Plague, cholera and small-pox	491	4.2
Others	1,387	11.8

As in the rest of the State 'fever' is responsible for a majority of deaths. But fever covers a number of ailments which the reporters are unable to identify. (*Vide* Table I, Part III of this volume).

Migration

4. About 90.2 per cent. of the people enumerated in the district at the census of 1951 were born there, 7.1 per cent. were born in the other districts of the State, 2.5 per cent. were born in other parts of India and only 0.2 per cent. came from other countries of the world. Of the immigrants from the districts of the State as many as 20,307 (males 3,902, females 16,405) were from the other districts of the same natural division and 19,429 (males 4,790, females 14,639) were from other parts of the State. The sex-ratio suggests that most of the migration from the neighbouring districts is marriage migration. Of 13,449 immigrants from the adjacent States 9,555 (males 1,819, females 7,736) are from Madhya Bharat and 2,256 (males 466, females 1,790) are from Vindhya Pradesh. Most of this migration is also marriage migration.

Of the immigrants who have come from territories beyond India 994 (males 533, females 461) were born in Pakistan and 45 (males 34, females 11) had their birth place in other territories. The Pakistan-born are the displaced persons who numbered 1,020 in the district. Of the immigrants born in other territories 39 (males 31, females 8) are Nepal-born.

There were no non-Indian nationals in the district.

Emigration from Jalaun is more important than immigration to it, but unfortunately the figures of migration are not available. According to the vital statistics the district appears to have lost over 18,000 persons during 1921—30, 25,000 persons during 1931—40 and 9,900 persons during 1941—50. It should, however, be borne in mind that the figures contain an element of registration error and are only indicative of trends. (*Vide* Tables D-IV and D-VI)

Census year	Population *	Net area sown (in acres)	Area of cultivation <i>per capita</i> (in cents)
1921	...	405,439	547,835
1931	...	426,022	568,633
1941	...	432,384	647,459
1951	...	555,239	732,701

capita has gone down to 132.0 cents in 1951 from 135.1 cents in 1921. It means that (other things being equal) every man, woman and child must expect to get less food and other agricultural produce from the land in 1951 than in 1921.

6. It may be examined whether the shortage has been compensated by an increase in the yield per acre. Increase in yield can be brought about by more double cropping, more irrigation, better fertilisation and better culture. The average (quinquennial) area sown more than once was 32,255 acres in 1921. It slightly decreased to 29,760 acres in 1931. There was a substantial decrease to 15,665 acres in 1941 but it again increased to 18,285 acres in 1951. The figures of double crop cultivation *per capita* in cents are as below:

Particulars	Quinquennial average for the year preceding			
	1951	1941	1931	1921
Double crop cultivation <i>per capita</i> in cents
Unirrigated double crop cultivation <i>per capita</i> in cents
Irrigated double crop cultivation <i>per capita</i> in cents

It is evident that double crop area has not kept pace with the rate of growth of population. Since 1941 it has been stationary.

7. The average area irrigated was 73,571 acres in 1921. The figures were 87,099 acres for 1931, 115,798 acres for 1941 and 145,078 acres for 1951. The average area irrigated more than once was 481 acres in 1921, 512 acres for 1931, 326 acres for 1941 and 415 acres for 1951.

The figures of irrigation *per capita* are shown in the table below :

Particulars	Years			
	1951	1941	1931	1921
Irrigated single crop cultivation <i>per capita</i> in cents
Irrigated double crop cultivation <i>per capita</i> in cents

It is satisfactory that the trend is towards an increase.

8. During the quinquennium 1916—21 88.8 per cent. of the cropped area was under food crops and only 11.2 per cent. of it was under non-food crops. Thirty years after, during 1946-51 the cropped area under food crops was 92.5 per cent. and that under non-food crops was 7.5 per cent.

The proportionate area under different crops in the district between 1911 and 1951 was as below :

Quinquennial average of	Total cropped area	Percentage of cropped area under							
		Rice	Wheat	Barley	Juar	Bajra	Gram	Others	
1911—16
1916—21
1921—26
1926—31
1931—36
1936—41
1941—46
1946—51

* The figures of population of the various censuses relate to the then lay-out of the district.

Decline of cultivation *per capita*

Double cropped area *per capita*

Irrigated area *per capita*

Cropped area

Cotton, indigo, opium and tobacco have gone out of cultivation. In 1901-02 the area under cotton crop was 37,584 acres; in 1950-51 it was only 59 acres. In 1901-02 the area under indigo was 272 acres; in 1950-51 it was nil. The area under opium in 1901-02 was 1,831 acres; in 1950-51 it has become nil. Under tobacco the area was 129 acres in 1901-02 while in 1950-51 it was only 38 acres. Sugar-cane have, however, shown improvement. The area in 1901-02 under sugar-cane was only 63 acres while it was 3,724 acres in 1950-51.

Live-Stock,
ploughs and
carts

9. Live-stock in this country live for a large part of the year on by-products of agriculture supplemented by green fodder crops. They have, therefore, to be correlated not only with the grazing available but also with the total area under cultivation which carries a major portion of the burden of supporting the cattle population.

As will appear from Table 3 of Part III the total number of cattle and buffaloes which had decreased between 1935 and 1944 has during 1944-51 increased from about 2.8 lakhs to about 3.5 lakhs.

The number of working cattle and buffaloes in the district was about 78.0 thousands in 1935, 87.1 thousands in 1944 and 107.2 thousands in 1951. This number of working cattle appears to be governed by the number of ploughs and carts. The number of ploughs has gone up from 36.1 thousands in 1935 to 40.0 thousands in 1944 and 50.71 thousands in 1951. This may be due, apparently, to progressive fractionalization of holdings. The number of carts has also started rising since 1935 and now it stands at 36,000. The average net cultivated area per plough works out to 15.59 acres in 1951 as against 17.66 acres in 1920 and the average net cultivated area per pair of working cattle works out to 14.75 acres in 1951 as compared with 15.95 in 1935.

Breeding cows and she-buffaloes are increasing ever since 1935. They were 98.9 thousands in 1935, 104.2 thousands in 1944 and 131.7 thousands in 1951. Cows and female buffaloes in milk per 1,000 of human population were 55 and 44, respectively. Owing to poor milk yield the share of milk per head is only a few ounces per day.

The number of sheep which were almost stationary during 1930-35 has been decreasing since then. Goats have also been going down in number since 1935 when they were about 1.2 lakhs. Their number in 1951 was only 68 thousands, the reduction during 1944-51 alone being about 28 per cent.

Horse and ponies are also declining in number; there was a steep fall during 1935-44 from about 7,000 to 5,000 and now their number stands at 4,000. Donkeys during the same period were reduced from over 3.8 thousands in 1935 to 1.6 thousands in 1951.

Poultry has increased from 8.7 thousands in 1944 to 13.8 thousands in 1951.

Distributed on 1,000 of human population the figures of the main categories of live-stock in 1951 are as follows:

Cattle	Buffaloes	Sheep	Goats	Poultry	Others
446	186	51	122	25	30

10. To sum up, the population of the district is growing up at the biological natural rate since 1921 but on the other hand the land area *per capita* has decreased. The magnitude of the absolute numerical increase in relation to the practically stationary acreage under cultivation is a great strain on the economy of the district. Unfortunately the district has also got large precarious areas.

Villages and
towns

11. The district has 928 villages and 9 towns. Out of the 5.6 lakhs of people who were counted at the census of 1951, 4.7 lakhs were found in villages and 0.9 lakhs in towns, i.e., there are as many as 841 people per 1,000 of population who live in rural areas and only 159 live in towns. The corresponding figures for the State as a whole are: rural 864, urban 136.

The rural population per inhabited village works out to 503. Most of the villages comprise of a single compact site. But there are 1,045 hamlets in the district. The population per hamlet is only 447. The medium-sized village—with inhabitants numbering between 500—2,000—is the dominant type in the district. Of the rural population 57.6 per cent. live in such villages; 31.3 per cent. live in smaller villages with population under 500; and 11.1 per cent. live in villages of population between 2,000—5,000.

Towns vary in number of inhabitants even more widely than villages. 47.5 per cent. of the urban population live in towns of population over 20,000 (Orai and Konch), 28.9 per cent. live in towns of population between 10,000 and 20,000 (Kalpi and Jalaun), 6.1 per cent. live in town of population between 5,000—10,000 (Rampura) and 17.5 per cent. in towns of population under 5,000 (Umri, Jagmanpur, Madhogarh and Kadaura). It is worth noting that the population of Orai and Kalpi has increased by 23.3 per cent. and 21.8 per cent. respectively since 1941. Konch has recorded an increase of 11.9 per cent. during the same period. Madhogarh appears to be a declining town. (Vide Tables A-III and A-IV).

12. Out of the total population of 555,239 (rural 466,797, urban 88,442) 403,181 (rural 380,407, urban 22,774) or 72·6 per cent. depend on agriculture for their means of livelihood and 152,058 (rural 86,390, urban 65,668) or 27·4 per cent. depend on non-agricultural sources. The following table gives the distribution of 100 persons of the total, rural and urban population of the district under the different livelihood classes :

**Occupations:
Livelihood
pattern**

Description	Agricultural classes					Non-agricultural classes				
	Total	I	II	III	IV	Total	V	VI	VII	VIII
Total	72·6	62·2	5·6	3·3	1·5	27·4	6·9	5·5	0·7	14·3
Rural	81·5	70·1	6·1	3·8	1·5	18·5	5·2	1·6	0·2	11·5
Urban	25·7	20·9	2·6	0·6	1·6	74·3	15·9	25·6	3·7	29·1

It is obvious that this district is one of the agricultural districts of the State. Here as many as 72·6 per cent. of the people depend on agriculture as against 74·2 per cent. in the whole State.

Of the total population of the district 292,621 persons (males 117,334, females 175,287) or 52·7 per cent. have been classified as non-earning dependant. The percentage of non-earning dependants in agriculture works out to 51·6 per cent. and that among non-agriculture 55·7 per cent. It will be observed that in the main they consist of women. The male non-earning dependants are mostly children. 91,643 persons (males 22,873, females 68,770) or 16·5 per cent. of the population are earning dependants. Among the agriculturists their proportion is 18·7 per cent. and among non-agriculturists they form only 10·5 per cent. Agriculture is a family occupation and it provides work to the women and grown-up children in the family. The remaining 170,975 persons (males 150,763, females 20,212) or 30·8 per cent. of the population consists of self-supporting persons. Their proportion among agriculturists is 29·7 per cent. and among non-agriculturists 33·8 per cent. Of the self-supporting persons 119,588 (males 108,351, females 11,237) belong to agricultural classes and 51,387 (males 42,412, females 8,975) to the non-agricultural classes. On an average one self-supporting person maintains two non-earning dependants.

Of the 51,387 self-supporting persons belonging to the non-agricultural classes 1,194 persons (rural 845, urban 349) earn their livelihood from non-productive sources. Of the remaining 50,193 self-supporting persons (rural 30,999, urban 19,194), 577 (rural 70, urban 507) or 1·2 per cent. are employers, 8,144 (rural 2,943 urban 5,201, or 16·2 per cent. are employees and 41,472 (rural 27,986, urban 13,486) or 82·6 per cent are independent workers.

The distribution of 10,000 self-supporting persons of non-agricultural occupations, classified according to the economic divisions is as follows :

Name of division	Self-supporting persons by divisions
All Industries and Services	10,000
0—Primary industries not elsewhere specified	362
1—Mining and quarrying	4
2—Processing and manufacture—foodstuffs, textiles, leather and products thereof	1,099
3—Processing and manufacture—metals, chemicals and products thereof	136
4—Processing and manufacture—not elsewhere specified	856
5—Construction and utilities	537
6—Commerce	1,630
7—Transport, storage and communications	272
8—Health, education and public administration	880
9—Services not elsewhere specified	4,224

Among the large scale industries the principal is wood industry. Among the cottage industries the principal is production of hand-made paper.

Variation in the
livelihood
pattern

13. The proportion of population depending on agriculture for their livelihood was 72.3 per cent. in 1951. The unfortunate fact is that the agricultural proportion had been increasing ever since 1911—when the figure stood at 52.8 per cent. The actual number of persons who depend on agriculture has increased to 401,400 in 1951 from 293,890 in 1921 or by 36.6 per cent. There appears to have been a gradual decline in village arts and handicrafts. The cumulative effect is a fall in the proportion of workers and a corresponding rise in dependency. The proportion of workers in total population in 1951 was only 47.3 per cent. (agricultural 34.8 per cent., non-agricultural 12.5 per cent.) against 59.2 per cent. (agricultural 43.2 per cent., non-agricultural 16.0 per cent.) in 1921. The proportion of non-earning dependants consequently increased from 40.8 per cent. (agricultural 29.3 per cent., non-agricultural 11.5 per cent.) in 1921 to 52.7 per cent. (agricultural 37.5 per cent., non-agricultural 15.2 per cent.) in 1951. All this is an index of the increasing unemployment and under-employment. It is only by the diversion of the population to cottage and other industries and by providing secondary occupations to the agriculturists that the present severe disequilibrium in the economy of the district can be redressed. (Vide Tables B-I, B-II and B-III)

House and
households

14. There were 91,506 occupied houses in the district—75,799 in villages and 15,707 in towns. That gives an average of 6,158 persons per 1,000 houses or 6.2 persons per house in the rural areas and 5,631 persons per 1,000 houses or 5.6 persons per house in the urban areas.

There were 108,624 households in the district—91,236 in villages and 17,388 in towns. That gives an average of 5,112 persons per 1,000 households or 5.1 persons per household in

Census year	Persons per 1,000 households, of	
	Rural population	Urban population
1921	4,650	4,479
1931	5,579	2,214
1941	5,076	5,192
1951	5,112	4,997

rural areas and 4,997 persons per 1,000 households or 5.0 persons per household in the urban areas. The marginal table shows the developments in the size of the household since 1921. The rural household had registered a marked increase in 1931. It decreased in 1941 and has been almost stationary since then. It is bigger than the average State rural household (5.07). The urban household has registered a decrease since 1941.

Out of 5,112 persons in every 1,000 rural households 2,673 are males and 2,439 are females. There is a male excess numbering 234 in every 1,000 households. Out of 4,997 persons in every 1,000 urban households 2,604 are males and 2,393 are females. There is a male excess numbering 211 in every 1,000 households.

Information regarding types of household and household relationships was also collected at this census with the help of a sample of about 4 per cent. According to this in every 1,000 sample households there are 5,292 persons (males 2,811, females 2,481) in the district. The corresponding figure for the total count is 5,094.

The table below shows the distribution by size of 1,000 sample households :

Description	Small with 3 members or less	Medium with 4—6 members	Large with 7—9 members	Very large with 10 members or more
Total	333	419	178	70
Rural	334	416	180	70
Urban	315	459	151	75

Medium households are the dominant type in villages as well as in towns.

*The figure includes earning dependants according to their secondary means of livelihood, while the figure 72.6 in paragraph 12 includes earning dependants according to their principal means of livelihood and hence the difference.

Family composition of 1,000 sample households is as follows :

Family composition of 1,000 sample households							Number in 1,000 house- holds	
A	{	Heads of households	...	{ Males (married)	730	
				{ Males (widowers)	263	
				{ Females	7	
	Wives of heads of households	730		
							<hr/> 1,730 <hr/>	
B	{	Sons of heads of households	1,077	
		Daughters of heads of households	649	
							<hr/> 1,726 <hr/>	
C	{	Male relations of heads of households (other than sons)	680	
		Females relations of heads of households (other than daughters)	944	
							<hr/> 1,624 <hr/>	
D	{	Persons unrelated to the heads of the households	...	Males	61	
				Females	151	
							<hr/> 212 <hr/>	
Grand Total							...	<hr/> 5,292 <hr/>

Sons outnumber the daughters of the heads of households. The latter leave the houses of their parents after marriage. Females relatives (other than daughters) outnumber the male relatives (other than sons). Such females are generally those who become members of these households by marriage. (*Vide* Tables A-I and C-I)

15. In the district as a whole the sex-ratio was 908, i.e., there are 908 females to every 1,000 males. It varied among the tehsils. The lowest value was 900 in Jalaun tehsil. The highest value was 921 in Orai tehsil. The ratio was 919 in Konch and 902 in Kalpi.

Sex-ratio

The sex-ratio is smaller in towns than in villages. For the district as a whole the sex-ratio in villages is as high as 911 (mainly due to male migration), while that in towns is only 893.

The corresponding figure of sex-ratio for the district was 901 in 1921, 908 in 1931, 904 in 1941 against 908 in 1951.

16. The number in each age-group in the district is shown below as a percentage of the total number of all ages in the total, rural and urban population separately :

Age-structure

		Total population			Rural population		Urban population	
Age-group		Persons	Males	Females	Males	Females	Males	Females
Infants and young children	0—4 ...	13.8	6.7	7.1	6.6	7.1	6.9	7.0
Boys and girls	5—14 ...	26.0	14.0	12.0	14.1	12.0	13.0	12.3
Young men and women	15—34 ...	34.0	18.0	16.0	17.9	16.0	18.7	15.9
Middle-aged men and women	35—54 ...	19.8	10.8	9.0	11.0	9.0	9.8	9.3
Elderly persons	55 and over	6.4	3.3	3.1	3.3	3.0	3.4	3.7

It will be seen that the population is progressive, 39.8 per cent. of the population is of age under 15 and only 6.4 per cent. of it consists of elderly persons. Again it may be noted that proportionately larger numbers in the working ages (15—34) are found in the urban areas. This is the effect of migration of the workers to the towns from the villages many of whom are unaccompanied by their families. (*Vide* Table C-II).

17. Out of every 10,000 persons in the district there are 5,278 males and 4,722 females*. Among them 2,466 males and 1,815 females are unmarried. If we reckon males and females together, the unmarried people are 42.8 per cent. of the population.

Marital status

Of the males 46.7 per cent. were unmarried, 46.1 per cent. were married and 7.2 per cent. were widowed or divorced. Among the females 38.4 per cent. were unmarried, 48.2 per cent. were married and 13.4 per cent. were widowed or divorced.

Of the married males 4.5 per cent. were of ages below 15, 55.3 per cent. were of ages 15—34, 33.4 per cent. were of ages 35—54 and 6.8 per cent. were of ages 55 and over. Among the married females 9.3 per cent. were of ages below 15, 61.1 per cent. were of ages 15—34, 26.0 per cent. were of ages 35—54 and 3.6 per cent. were elderly women.

* The corresponding figures for the total count are 5,240 and 4,760.

Marriage is universal. Among males and females aged 35 years and over 8·7 per cent. of the males and 0·8 per cent. of the females were found unmarried. Most of the females are married before they attain the age of 25. Child marriage is still prevalent. 5·3 per cent. of the males of ages 0—14 and 11·0 per cent. of the females of ages 0—14 were returned as married. (Vide Table C-III)

Languages

18. Over 99·8 per cent. of the people of the district returned Hindi, Hindustani or Urdu as their mother-tongue. Among the other mother-tongues spoken the main are Sindhi (0·1 per cent.) and Punjabi (0·1 per cent.) of the 5·55 lakhs of the population in the district only 914 or 0·2 per cent. were bilingual (in an Indian language). Those whose mother-tongue is other than Hindi, Hindustani or Urdu are generally the migrants who are able to speak any of these as subsidiary language. Persons returning Hindi, Hindustani or Urdu as secondary language were 839 or 91·8 per cent. of those who were bilingual in some Indian language. (Vide Table D-I)

Religion and special groups

19. Out of 10,000 population of the district the number of people belonging to different religions is : Hindus 9,253, Muslims 739, Sikhs 4, Christians 2 and Jains 2 ; of 10,000 population in villages the numbers are : Hindus 9,524, Muslims 473, Sikh 1, Christian 1, Jain 1 ; and of 10,000 population in towns the numbers are : Hindus 7,827, Muslims 2,143, Sikhs 15, Christians 9 and Jains 6. Muslims, Sikhs and Christians are generally concentrated in the urban areas of the district as is the case in other parts of the State.

There are 126 thousands persons belonging to the Scheduled Castes in the district. Their number per 10,000 of population works out to 2,275. In villages they are 2,423 for every 10,000 and in the towns their number per 10,000 is only 1,489. (Vide Tables D-II and D-III)

Displaced persons

20. The number of displaced persons in the district at the census was 1,020 (males 558, females 462). Of them 95·1 per cent. have come from West Pakistan, 0·4 per cent. from East Pakistan and 4·5 per cent. from districts which could not be traced.

Literacy

21. The percentage of male literacy was 25·5 in the district while that of female literacy was 3·8 only. In 1931 the male literacy was 12·4 per cent. only ; among females the percentage of literates in 1931 was only 1·0*. On January 1, 1951, there were 485 primary schools in the district with enrolment of 31,361. (Vide Table D-VII)

C—EXPLANATORY NOTE ON THE STATISTICS

The statistics in this volume have been presented in three parts :

I—District Census Tables

II—Village, Town, Pargana and Thana Statistics

III—Miscellaneous Statistics

Parts I and II contain census data. A brief account of the system of sorting of census slips and preparation of tables and abstract therefrom is given below.

Part III contains statistics throwing light on special aspects of population and its growth. These have been derived from miscellaneous sources. Table 1, "Vital Statistics", has been prepared from the published and unpublished records of the Director of Medical and Health Services, Table 2, "Agricultural Statistics", from the Annual Season and Crop Reports, Table 3, "Live-stock, Agricultural Machinery and Implements", from the published figures of Live-stock Census and Table 4, "List of Primary Schools", from information specially supplied by District Inspector of School.

Processing of census data

2. The census data presented here has been derived from the census slips by a process of sorting, compilation and tabulation. In previous censuses the slips were first sorted by religion and this division was maintained throughout so that all data was cross-tabulated by religion. This procedure has been abandoned at this census and substituted by a division based on economic characteristics of the population. The whole population has been divided into eight livelihood classes, four of which are of the agricultural category and four of non-agricultural category as follow :

Agricultural Classes—

I—Cultivators of land wholly or mainly owned ; and their dependants

II—Cultivators of land wholly or mainly unowned ; and their dependants

III—Cultivating labourers ; and their dependants

IV—Non-cultivating owners of land ; agricultural rent receivers ; and their dependants

* The numbers per mille (of the 10 per cent. sample population) of each sex aged 5 years and over who were returned as literate are as below :

Males		Females	
1951	1931	1951	1931
246	145	47	12

Non-agricultural Classes—

V—Production (other than cultivation)

VI—Commerce

VII—Transport

VIII—Other services and miscellaneous sources

Another special feature of the sorting of this census was the separation, from the very start, of slips of displaced persons and of a 10 per cent. random sample from the remainder. This has enabled the data of displaced persons to be presented separately while the 10 per cent. sample has been utilized for the preparation of Age Tables.

The slips of this census have been copied by Households into a National Register of Citizens, which has been prepared village-wise for rural areas and mohalla/ward-wise for urban areas. Table C-I is based on a 4 per cent. sample extracted from this Register.

3. The slips were first sorted by villages for the preparation of the Primary Census Abstract. For the purpose of further sorting the State was divided into tracts consisting of (a) *rural tracts*, comprising the rural population of each tehsil, (b) *urban city tracts*, comprising the population of areas which had been declared as cities, (c) *urban non-city tracts*, comprising the population of urban areas of a district excluding areas declared as cities. Each tract was treated as a unit for sorting of slips. All data were compiled first by tracts and then by districts. This volume presents the tract-wise data for one district (with the exception of A and E Tables, which have been presented tehsil-wise), while the district-wise data for the whole State is contained in the following State volumes :

Tracts

Part I-B—Subsidiary Tables

Part II-A—General Population Tables

Part II-B—Economic Tables

Part II-C—Age and Social Tables

4. Detailed explanatory notes are appended to each State table in the printed volumes of State tables. They apply to the tables in this volume also and should be referred to when necessary. A few notes of some of the tables are reproduced below :

Explanatory
notes

Table A-I—Column 5 relating to “hamlets” has been introduced for the first time. Any distinctive cluster or agglomeration of houses has been treated as a “hamlet”.

A clear distinction has been made in this census between a “House” and a “House-hold”. A house is any human dwelling having a separate main entrance while a household is any commensal unit living in a census house. In previous censuses the figures under “Occupied Houses” used to be that of households, while the figures under columns 7—9 of the present tables refer to occupied census houses as distinct from households.

The Economic Tables—The Indian Census Economic Classification Scheme, 1951, together with the occupational division and sub-division adopted for the census are given in Part II-B of the Report.

Table B-I—Each of the eight livelihood classes mentioned above has been divided into three sub-classes, with reference to the economic status, as follows :

- (i) Self-supporting persons ;
- (ii) Non-earning dependants ; and
- (iii) Earning dependants

These were defined in the Instructions to Enumerators as follows :

“A ‘self-supporting person’ is one who is in receipt of an income and that income is sufficient at least for his own maintenance. To be ‘self-supporting’ a person need not be able to support his family. All that is necessary is that he should be earning sufficient for his personal needs. For purposes of this question the person enumerated is the unit and not the family or household. Any one who is not a ‘self-supporting’ person in this sense is a ‘dependant’. A ‘dependant’ may be either an ‘earning dependant’ or a ‘non-earning dependant’. The test is whether he secures a regular (and not casual) income, even though it may be small. Such income may be in cash or kind ; it may be continuous or seasonal employment. When the income which he secures is not sufficient to support him that person is an ‘earning dependant’. A person who does not earn any income either in cash or kind is a ‘non-earning dependant’. Where two or more members of a family household jointly cultivate land and secure an income therefrom, each of them should be regarded as earning part of the income. None of them is, therefore, a non-earning dependant. Each of them should be classed either a ‘self-supporting person’ or ‘an earning dependant’ according to the share of income attributable to each. The same applies to any other business carried on jointly. The share of the income is what the head of household deems it to be. This does not mean that every one who works is necessarily a self-supporting person or an earning dependant. Thus, for instance, a housewife who cooks for the family, brings up the children or manages the household is doing very valuable work. Nevertheless, her economic status is that of a non-earning dependant, if she does not also earn an income, and should be recorded as such.”

Economically active, Semi-active and Passive persons—All non-earning dependants are economically passive. They include persons performing house-work or other domestic or personal services for other members of the same family households. But they do not include “unpaid family workers” or persons who take part along with the members of the family household in carrying on cultivation or a home industry as a family enterprise.

All earning dependants are economically semi-active only. Though they contribute to the carrying on of economic activities, the magnitude of their individual contribution is deemed to be too small to justify their description as economically active. (Their contribution to economic activity is, however, taken into account in the tabulation of data based on secondary means of livelihood.)

All self-supporting persons are, ordinarily economically active with the exception of the following classes and groups :

(a) All self-supporting persons of Agricultural Class IV.

(b) The following groups of self-supporting persons who are included in Non-agricultural Class VIII and derive their principal means of livelihood from miscellaneous sources (otherwise than through economic activity) :

(i) Persons living principally on income from non-agricultural property ;

(ii) Persons living principally on pensions, remittances, scholarships and funds ;

(iii) Inmates of alms-houses and recipients of doles ;

(iv) Beggars and vagrants ; and

(v) All other persons living principally on income derived from non-productive activities.

Table B-II—For a self-supporting person who has more than one means of livelihood the secondary means of livelihood is the livelihood next in importance to his principal means of livelihood. For an earning dependant it is the source from which he secures his own income, where there are more than one subsidiary occupations only the one providing the largest income has been taken into account.

Table B-III—“Employers” “Employees” and “Independent Workers” have been defined, as follows in the Instructions to Enumerators :

An “employer” is only that person who has necessarily to employ other person in order to carry on the business from which he secures his livelihood. Thus if a person employs a cook or any other person for domestic services, he should not be recorded as an “employer” merely for that reason.

An “employee” is a person who ordinarily works under some other person for a salary or a wage in cash or kind as the means of earning his livelihood. There may be persons who are employed as managers, superintendents, agents, etc. and in that capacity control other workers. Such persons are also employees only and should not be regarded as “employers”.

An “independent worker” means a person who is not employed by any one else and who also does not employ any body else in order to earn his livelihood. (Sweepers, *dhobis*, *kahars*, etc. who work for several masters are independent workers. If, however, any of them accepts whole-time employment under one master he becomes “employee”. Daily wage-earners who work for different masters are likewise independent workers. But if they accept employment under one master, e.g., under a factory, they become “employees”.)

Tables C-II, C-III, C-IV and C-V—The figures presented in these tables are based on single year age-return and have not been smoothed.

Tables D-V (i) and (ii)—For the purpose of these tables a “displaced person” has been defined as follows :

“A displaced person means any person who has entered India having left or being compelled to leave his home in Western Pakistan on or after the 1st March, 1947, or his home in Eastern Pakistan on or after the 15th October, 1946, on account of civil disturbances or on account of the setting up of the two Dominions of India and Pakistan.”

PART I

DISTRICT CENSUS TABLES

A—GENERAL POPULATION TABLES

A-I—Area, Houses and Population

Serial number					Occupied houses					
	Tehsil				Area in square miles	Villages	Hamlets	Towns	Total	Rural Urban
1	2				3	4	5	6	7	8 9
District Total	1,761	928	1,045	9	91,506	75,799 15,707
1 Jalaun	514	366	430	5	33,107	28,825 4,282
2 Kalpi	480	190	216	2	19,675	16,233 3,442
3 Konch	409	248	274	1	22,543	18,930 3,613
4 Orai	358	124	125	1	16,181	11,811 4,370

Serial number	Population									
	Persons				Males			Females		
	Tehsil	Total	Rural	Urban	Total	Rural	Urban	Total	Rural	Urban
1	2	10	11	12	13	14	15	16	17	18
District Total		555,239	466,797	88,442	290,970	244,239	46,731	264,269	222,558	41,711
1 Jalaun ...		213,388	183,949	29,439	112,324	96,664	15,660	101,064	87,285	13,779
